Profile

Are you looking for intelligent IT solutions?

My creativity and my patience towards coding is ready to be put to use tough test.

Experience

SIANA: Moroccan Society of High Speed Trains

Tangier, Morocco

IT Project Manager

Jul 2023 – Today

- **Mission:**
 - **Development and Implementation:** Build and deploy full-stack web applications that enhance business operations by improving user experiences, reducing manual processes, and increasing overall efficiency.
 - **Creation of Digital Platforms:** Design and develop robust digital platforms, utilizing advanced front-end and back-end technologies, to streamline business processes and facilitate seamless collaboration across teams.
 - **Leadership in Digital Transformation:** Lead initiatives to modernize and digitalize business operations by implementing new technologies and guiding development teams in best practices for full-stack development.
 - **Project Management:** Oversee full-stack development projects from concept to deployment, ensuring that all aspects of the software, including user interfaces and databases, are fully optimized for performance and security.
- **Technical Skills:** Programming Languages (Python, Java, Vba, C#), Web Development (HTML, CSS, JavaScript, TypeScript), Databases (SQL, NoSQL *MongoDB, MySQL*), Development Frameworks (Django, Flask, React, Three.js, Angular, Vue.js, Node.js), DevOps & Tools (Docker, Git, CI/CD), User Experience (Figma, UI/UX Design), 3D and VFX (Blender).
- **Personal Skills:** Teamwork (Collaboration with cross-functional teams), Project Management (Agile methodologies, Scrum, Kanban), Communication (Effective communication of complex ideas), Problem-Solving (Analytical thinking and creative solutions), Adaptability (Ability to quickly learn and apply new technologies).

SIANA: Moroccan Society of High Speed Trains

Tangier, Morocco

Intern In Programming

Feb 2023 – Jul 2023

- **Mission:**
 - Development of an application for creating Weekly Production Planning.
 - Automation of updating an action plan file for monitoring and bringing high-speed trains into compliance.
 - Creation of an online virtual tour, implementing web technologies to offer an immersive experience to customers and partners.
- **Technologies Used:** Reinforcement Learning, Microsoft Graph API, Gurobi, Operations Research, Generative AI (NLP).

COFICAB Group

Kenitra, Morocco

Intern in Computer Science and Information Technologies

Jul 2022 – Sept 2022

- **Mission:**
 - Creation of a graphical interface visualizing in real-time the filling and emptying of a tank.
 - Implementation of MQTT protocol for retrieving sensor data from a connection to a central server.
 - Automation of the filling and emptying system by implementing Python code on an Arduino board.
- **Technologies Used:** MQTT Protocol, Computer Vision, Arduino, Python, Industry 4.0, IoT.

Education

ENSAM - Meknes

Meknes, Morocco

Engineering Degree in Artificial Intelligence and Data Science

2021 – 2023

ENSAM - Meknes

Meknes, Morocco

Integrated Preparatory Classes

2017 – 2020

Projects

ModaMind E-commerce Website

Tangier, Morocco

Freelance Project

Jan 2024 – Feb 2024

- Developed a comprehensive online shopping platform using React and MongoDB Atlas.
- Implemented an administrative section for product management, price updates, inventory control, and user management.
- Created a client section featuring a product catalog, detailed product pages, shopping cart, and streamlined checkout process.
- Ensured responsive design and secure authentication mechanisms for a seamless user experience.
- Utilized Redux for state management and Material-UI for modern, user-friendly design.

YmmHR Application

Meknes, Morocco

Yazaki Meknes

Jan 2023 – May 2023

- Developed an HR management application using Django, designed for Yazaki Meknes.
- Implemented differentiated access levels, allowing HR, department managers, collaborators, and regular users to efficiently perform their daily tasks.
- Integrated features for employee management, task assignment, and performance tracking.
- Ensured secure authentication and authorization mechanisms to protect sensitive data.
- Utilized Django’s robust framework for rapid development and scalability.

Fintech Project with Web Scraping

Rabat, Morocco

Sponsored by Trading Company

Dec 2022 – Jan 2023

- Implemented automated data extraction and aggregation from various financial websites to provide real-time market insights.
- Analyzed stock market trends and business news to support trading strategies and decision-making.
- Ensured data accuracy and reliability through robust scraping techniques and error handling.
- Utilized Python and libraries such as BeautifulSoup and Scrapy for web scraping tasks.

Worker Health and Safety using Computer Vision

Meknes, Morocco

ENSAM - Meknes

Oct 2022 – Jan 2023

- Developed a computer vision application to enhance worker health and safety in industrial environments.
- Utilized deep learning models for accurate detection and classification of safety equipment such as helmets and vests.
- Integrated alert systems to notify supervisors of non-compliance or potential safety risks.
- Utilized OpenCV, and TensorFlow for developing and training the computer vision models.
